

METALWORKING FLUIDS EQUIPMENT & SERVICE

metalworking fluids

Range of high performance fluids for machining, forming, EDM, heat treatment, corrosion protection, cleaning, degreasing, solvents and industrial lubricants.

swarf processing equipment

The equipment solutions include briquetters, manual and automatic centrifuges, crushers and central systems.

coolant and oil equipment

Including coolant mixing and distribution, tramp oil, coolant /oil cleaning units, centrifuges, filtration and spill kits, absorbent products.

coolant mist filtration

Individual coolant and oil mist filter units come with washable and H13 HEPA filtration with flowrates ranging from 500 – 3000 m³/hour

oil & swarf vacuums

Lubriserv provide powerful industrial vacuums for oils & coolants with swarf separation and a range of liquid phase filtration options from 300µ down to fine filtration at 5µ.

additional services

The additional services a range of onsite machine cleaning and coolant management solutions that fully comply with HSE guidelines.

High performing metalworking fluids

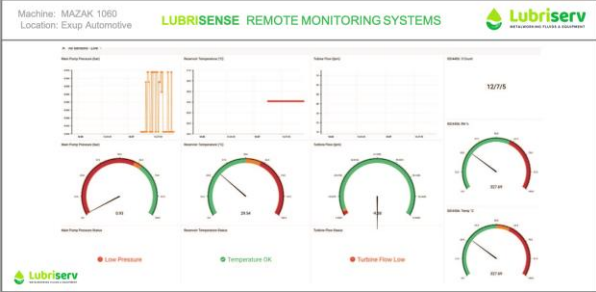

Lubriserv provide a comprehensive range of lubricants for industrial applications including: cutting, forming, EDM, heat treatment, lubrication, cleaning and corrosion prevention. Our products are well known for extremely high performance and benefit our customers with significant cost savings and process improvements.

Lubricut™ is a range of neat high performance cutting fluids with unrivalled high quality performance on sliding head machines. Lubricut dramatically reduces consumption, significantly increases tool life and with exceptionally high flash point reduces fire risk and fumes as well as keeping machines and components cleaner.

Ultrakuhl™ is a range of water based metalworking fluids that have been developed with the most technologically advanced formulations meeting the latest legislative and health and safety requirements.

Ultrakühl™

Swarf processing systems

Effective swarf management is of key importance; managing your swarf effectively will save you time and effort, help the environment. A Lubriserv centrifuge or swarf compactor can increase fluid recovery to 80% and significantly increase your swarf value. Our systems include: briquetters, crushers, manual and automatic centrifuges

Fluid management equipment

Lubriserv provide a comprehensive range of fluid equipment that includes; tramp oil separators, centrifuges, coolant mixers, oil recycling equipment and LUBRI-SENSE for remote monitoring of oils or coolant concentration, pH, conductivity and temperature.

Alfie 500 and Emmie units are high speed separator systems used for cleaning coolants and oils capable of removing particles down to one micron.

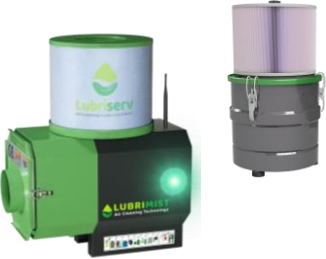

Oil and swarf vacuums

Lubriserv offer a range of state of the art vacuums that offer benefits including:

- Machine cleaning
- Swarf separation
- Coolant filtering
- Recycling
- Suck and pump out
- 2 year warranty

Oil mist filters

- HSE compliance
- Prevent respiratory problems
- Remove oil mists
- Cleaner machines
- No servicing required
- Washable filter

Oil mist filtration can be costly and hazardous if it's not suitably extracted. Lubriserv offer a range of oil mist filter units with capacities ranging from 500 to 4000m3/hr allowing mist capture from even the largest machine tools with a 99.9% filter efficiency.

Services

Machine and coolant problems can be costly - these issues include: smells, tramp oil, poor tool life, smoking / fumes, high coolant consumption, dirty and sticky machines, health and safety issues as well as expensive waste costs.

- Machine cleaning
- Coolant & Oil cleaning
- Coolant management
- Dipslide testing
- Air filter management
- HSE conformity advice

Our coolant cleaning service will recycle your costly coolant and prolong its life, improve machine performance whilst keeping health and safety issues to a minimum.
